

Forrestfield Woodlupine Brook Living Stream and Ecological Corridor Project

We're transforming Woodlupine Brook from Strelizia Ave to Dawson Ave into a functioning living stream resulting in a more attractive and useable waterway for wildlife and the community.

*tree locations are illustrative only

Key Objectives

- Retain and protect the mature local native trees within the Brook
- Realign the Brook to protect the steeply eroded banks
- Reshape the Brook embankments and floodplain to stabilise erosion
- Install riffle and pool systems to manage the stormwater surges through the channel
- Revegetate the floodplain to increase habitat and allow movement of birds and other native animals along the Brook.
- Utilise existing pathways for residents to access reserve
- Maintain the majority turfed areas for amenity

Stage 1 Partners:

Water Corporation (earthworks associated with the Brook Channel)

City of Kalamunda and Friends of Woodlupine Brook (landscaping works)

State Natural Resource Management Program (supply and installation of plants)

natural resource management program
